

EthanOS 0.7.1 “Frisky Feline” Quick-Start Guide

Getting Booted Up

Getting booted into EthanOS 0.7.1 is easy! Just go in to your computer's BIOS (look up how, since it differs from model to model), and change the boot order to boot from your DVD drive. Then, put the Live CD in your DVD drive and restart your computer.

Get familiar with EthanOS

On the bottom of your screen there is an app dock. It is called the **Plank**. Here, you can put whatever application you like.

On the top left-hand corner, there is the **EthanOS Advanced Menu**. Here, you can launch applications, search for files, or search the web for keywords.

On the Desktop, below the Menu, there is your Computer. Here, you can look for files, and browse the file system.

Changing Settings

To change settings, go to your **Plank** and look for the app called **Control Center**. Here, you can change settings in EthanOS.

Developer Tools

If you know some things about linux, use the **Terminal** app on your **Plank** to make **ROOT Changes**.

Ready to Install?

If you want to install EthanOS, Launch the **Install** app on your desktop. Click **Yes** until you see this screen:

Then, choose your option.

To dual boot EthanOS with Windows, follow the instructions at the link here:
